Vishal Arya – DevOps Engineer

Mobile: +91 9968747311 | **Email**: vishal1.80arya@gmail.com
Address: Delhi, India
LinkedIn: https://www.linkedin.com/in/vishal-sudo | **Website:** vishal-sudo.github.io | **GitHub**: https://github.com/vishal-sudo

Summary

DevOps and Cloud Engineer with 5 years of experience in automating, securing, and optimizing infrastructure across on-premise and cloud environments. microservices, and event-driven architecture with secure cloud deployments and collaborating with cross-functional teams to deliver high-quality solutions Skilled in Kubernetes, Ansible, Docker, and CI/CD pipelines, with a proven track record of driving performance, reliability, and cost efficiency.

Core Skills

- **Scripting Languages:** Bash, Python
- **Database Management System:** MongoDB, MySQL, Influx DB
- **Containerization & Orchestration tools**: Docker, Kubernetes, K3S, Helm, AKS, EKS
- **Collaboration & Version Control tools:** Git, GitHub, GitLab
- **Platform/ Automation:** Terraform**,** Ansible
- **CI/CD:** Gitlab (CI/CD), Argo CD, GitHub Actions, Azure ADO
- **Cloud Platform:** AWS (S3, EKS, VPC, ELB, IAM), Azure (ADO, AKS, ACR, IAM), OCI
- **Virtualization:** VMware, Proxmox

Professional Experience

IT Operations & DevOps Engineer | PricewaterhouseCoopers (PwC) India ***Gurgaon, India| July 2024 – Present***

Linux System Engineer | Tata Consultancy Services (TCS) ***Noida, India| Feb 2021 – Jul 2024***

Agentic Platform- GitSecOps (Ongoing)

- Architected scalable **AKS cluster** supporting **1000+ concurrent users with dedicated agent pods**.
- Implemented **GitOps** model integrated with **Azure DevOps**, reducing manual deployments by **80% and deployment failures by 60%.**
- Automated infrastructure provisioning using **Terraform**, cutting environment setup time from days to under 1 hour.
- Embedded **DevSecOps** controls (**Trivy, Checkov, SonarQube**) into **CI/CD** pipelines to prevent vulnerable builds & code Quality.
- Improved monitoring & incident response using **Prometheus/Grafana**, reducing detection time by 40%.
- Designed auto-scaling and HPA architecture maintaining >99.5% availability.

Custom UI Dashboard – Infra Monitoring

- Established microservices with **Docker** to facilitate scalable infrastructure monitoring, attained **95% reduction** in manual reporting efforts.
- Designed a custom monitoring dashboard using **Grafana integrated with Prometheus, InfluxDB, and Telegraf** to visualize system performance across **VMware, SCOM, and Dell NetApp** environments.
- Deployed components in **Docker containers** for scalability and modularity.
- Improved infrastructure **visibility by 60% and** reduced troubleshooting time by 40% through observability.
- Collaborated with cross-functional teams to **optimize deployment time by 35%**, improving release reliability and reducing downtime during infrastructure changes.

Ansible Automation Platform Implementation

- Replaced legacy Puppet setup with **Ansible Automation Platform (AAP)** to improve scalability and 25% cost savings.
- Deployed and configured Ansible Tower, developing 15+ **playbooks** for **patching**, compliance, Alerting, Notification and **vulnerability** management.
- Onboarded 100+ servers (**on-prem + cloud**) and achieved 50% faster patch cycles at less cost. Integrated vulnerability remediation tasks in Ansible playbooks, improving patching efficiency by 35% and ensuring consistent configuration management across environments.

OCI Vulnerability Management with NIS

- Installed and configured NIS security tools on **90+ OCI servers,** ensuring continuous compliance and achieving 0% downtime during security operations.
- Initialized NIS-based vulnerability scanning and patch enforcement, strengthening server hardening and reducing potential exposure by 40%.
- Onboarded OCI servers, including multiple appliance-based and Linux distributions, into Ansible automation workflows for vulnerability assessment (VA) and remediation.

VMware to Hyper-V Migration – Cost Saving

- Led Linux VM migration from VMware ESXi to Hyper-V to achieve **65% cost reduction** after VMware licensing changes**.**
- Recompiled **Linux kernels** for **Hyper-V compatibility** and ensured 0% data loss during migration.
- **Delivered optimized, secure, and 65% cost-efficient virtualization infrastructure.**

IT Support & Systems Administration

- Performed server migrations with 99.9% uptime, ensuring seamless transition and full data integrity.
- Installed and configure **Linux server utility tools** (web, DB, and file servers) to improve uptime and performance.
- Systematized patch **management and system updates**, improving security and reducing manual effort.
- Collaborated with cross-functional teams to troubleshoot complex issues, to deliver minimizing downtime and improve system reliability.
- Executed OpenShift cluster upgrades and patching across production environments, enhancing system stability by 25% and preserved compliance with security baselines.
- Deployed virtual servers and appliances via OVA templates, reducing deployment time by 30% and improving environment consistency.

Independent Projects

❖ **Project:** Custom Linux Distribution (Viar-OS)

➢ ***Key Achievement:*** Created and maintained an open-source Arch-based Linux distro targeting both novice and power users, with features such as **graphical installer, multi-DE support, BTRFS snapshots, and performance tuning with Zram**.

❖ **Project:** Self-Hosted Cloud Infrastructure Lab

➢ ***Key Achievement:*** Constructed and managed a home lab simulating real-world cloud and enterprise environments using Proxmox, K3s, Kubernetes, Cloudflare Tunnels, and Nginx Proxy Manager. **handle deployment and secure hosting of 10+ services** (Nextcloud, Emby, WordPress, AdGuard, etc.) across virtualized and containerized infrastructure.

❖ **Project:** Deployment & Scalable Applications on EC2 with K8S and Argo CD

➢ ***Key Achievement:*** Kubernetes dashboard for visual management of containerised applications on AWS EC2 instances. Utilised Argo CD for automated deployment pipelines, **enhancing deployment efficiency by 60%.** Achieved seamless scaling and high availability, supporting 99.9% uptime for critical applications. This project description emphasises your role in leveraging AWS EC2, Kubernetes, and Argo CD to auto sync application deployment processes effectively.

Education

- **Master of Computer Applications** | Rajdhani Collage, Indira Gandhi National Open University
- **Bachelor of Computer Applications** | IITM, Guru Gobind Singh Indraprastha University
