

Vishal Arya – DevOps & Cloud Engineer

Mobile: +91 9968747311 | Email: vishal1.80arya@gmail.com | Address: Delhi, India | LinkedIn: <https://www.linkedin.com/in/vishal-sudo>
Website: vishal-sudo.github.io | GitHub: <https://github.com/vishal-sudo>

Summary

DevOps & Cloud Engineer with 5 years of experience automating, securing, and scaling infrastructure across on-prem and cloud (AWS, Azure, OCI). Specialized in Kubernetes, Terraform, Ansible, and GitOps-driven CI/CD pipelines with a strong focus on cost optimization, security, and platform reliability.

Core Skills

- **Scripting Languages:** Bash, Python, YAML
- **Containerization & Orchestration tools:** Docker, Kubernetes (k8s), K3S, Helm, AKS, EKS
- **Collaboration & Version Control tools:** Git, GitHub, GitLab
- **Infrastructure as Code:** Terraform, Ansible (incl. Ansible Automation Platform)
- **CI/CD & GitOps:** GitLab CI/CD, Argo CD, GitHub Actions, Azure DevOps (ADO)
- **Cloud Platform:** Amazon Web Services - AWS (S3, EKS, VPC, ELB, IAM), Azure (AKS, ACR, ADO, IAM), OCI
- **Observability:** Prometheus, Grafana, OpenSearch, Open Telemetry, Jaeger, Grafana Alloy (Loki & Tempo)
- **Database Management System:** MongoDB, MySQL
- **Virtualization:** VMware, Proxmox, Hyper-V

Professional Experience

Sr Software Engineer (DevOps / SRE) | LTMindtree (Client: American Express) **Gurgaon, India | Apr 2026 – Present**

Enterprise Observability Platform

- Operated a **Rancher-managed Kubernetes** platform running 100+ observability workloads (OpenSearch, Kafka, Jaeger, OpenTelemetry) sustaining 99.9% service availability across distributed microservices.
- Administered **OpenSearch, Open Telemetry, Kafka, Grafana, Jaeger, and in-house monitoring tools** supporting distributed microservices.
- Performed platform troubleshooting, RCA, and performance tuning, reducing incident resolution time by **30%**.
- Collaborated with engineering teams to improve platform stability, supporting **99.9% service availability**.
- Analyzed distributed application performance using logs, metrics, and traces to identify bottlenecks and optimize system reliability.

DevOps Engineer | PricewaterhouseCoopers (PwC) India

Gurgaon, India | July 2024 – Apr 2026

Agentic Platform- DevSecOps

- Architected a scalable AKS platform supporting 1000+ concurrent users via dedicated agent pods and HPA-based auto-scaling, sustaining >99.5% availability.
- Implemented a GitOps model integrated with Azure DevOps and Argo CD, reducing manual deployments by 80% and deployment failures by 60%.
- Authored 50+ Terraform modules for AWS/Azure infrastructure, cutting environment provisioning from **days to under 1 hour** and templating it for repeatable GitOps delivery.
- Embedded DevSecOps controls (Trivy, Checkov, SonarQube) into CI/CD **YAML** pipelines to block vulnerable builds and enforce code quality.

Infra Monitoring Dashboard

- Established microservices with **Docker** to facilitate scalable infrastructure monitoring, attained **95% reduction** in manual reporting efforts.
- Designed a custom monitoring dashboard using **Grafana integrated with Prometheus, InfluxDB & Telegraf** to visualize system performance across **VMware, SCOM, and Dell NetApp** environments.
- Deployed components in **Docker containers** for scalability and modularity.
- Improved infrastructure **visibility by 60%** and reduced troubleshooting time by 40% through observability.

Ansible Automation Platform Implementation

- Replaced legacy Puppet setup with **Ansible Automation Platform (AAP)** to improve scalability and 25% cost savings.
- Deployed and configured Ansible Tower, developing 15+ **YAML playbooks** for **patching**, compliance, Alerting, Notification and **vulnerability** management.
- Onboarded 100+ servers (**on-prem + cloud**) and achieved 50% faster patch cycles at less cost. Integrated vulnerability remediation tasks in Ansible playbooks, improving patching efficiency by 35% .

OCI Vulnerability Management with NIS

- Installed and configured NIS security tools on **90+ OCI servers**, ensuring continuous compliance and achieving 0% downtime during security operations.
- Initialized NIS-based vulnerability scanning and patch enforcement, strengthening server hardening and reducing potential exposure by 40%.
- Onboarded OCI servers, including multiple appliance-based and Linux distributions, into Ansible automation workflows for vulnerability assessment (VA) and remediation.

Linux System Engineer | Tata Consultancy Services (TCS)

Noida, India | Feb 2021 – Jul 2024

VMware to Hyper-V Migration – Cost Saving

- Led Linux VM migration from VMware ESXi to Hyper-V to achieve **65% cost reduction** after VMware licensing changes.
- Recompiled **Linux kernels** for **Hyper-V compatibility** and ensured 0% data loss during migration.
- **Delivered optimized, secure, and 65% cost-efficient virtualization infrastructure.**

Systems Engineering & Migration

- Performed server migrations with 99.9% uptime, ensuring seamless transition and full data integrity.
- Installed and configured **Linux server utility tools** (web, DB, and file servers) to achieve 90% uptime and performance.
- Led zero-downtime OpenShift cluster upgrades across 20+ production environments, lifting system stability 25% while maintaining security-baseline compliance.
- Deployed virtual servers and appliances via OVA templates, reducing deployment time by 30% and improving environment consistency.

Independent Projects

❖ **Project:** Custom Linux Distribution (Viar-OS)

Key Achievement: Created and maintained an open-source Arch-based Linux distro targeting both novice and power users, with features such as **graphical installer, multi-DE support, BTRFS snapshots, and performance tuning with Zram.**

❖ **Project:** Self-Hosted Cloud Infrastructure Lab

Key Achievement: Constructed and managed a home lab simulating real-world cloud and enterprise environments using Proxmox (hypervisor), Docker compose, K3s, Cloudflare Tunnel, VPN & Reverse Proxy etc. **handle deployment and secure hosting of 25+ services** including AI Agents across virtualized and containerized infrastructure.

❖ **Project:** Deployment & Scalable Applications on EC2 with Kubernetes and Argo CD

Key Achievement: Kubernetes dashboard for visual management of containerised applications on AWS EC2 instances. Utilised Argo CD for automated deployment pipelines, **enhancing deployment efficiency by 60%**. Achieved seamless scaling and high availability, supporting 99.9% uptime for critical applications. Deployed containerized apps to EC2 with a GitOps pipeline (Argo CD) — 1-line dashboards for cluster management, 99.9% uptime, deploy frequency up 60%.

Education

- **Master of Computer Applications** | Rajdhani College, Indira Gandhi National Open University
- **Bachelor of Computer Applications** | IITM, Guru Gobind Singh Indraprastha University
